VISUALISATION, CLEARLY ENHANCED.

ELEVATED COLOUR SENSITIVITY

Through a dual flex and thin lens design, combined with new advancements in image optimisation, the HFL38xi was engineered for increased penetration, clarity, and colour sensitivity. You can now better visualise nerves and vessels, whether it be for procedural guidance or flow analysis.

OPTIMISED IMAGING EXPERIENCE

DirectClear Technology is a novel, patent-pending process that elevates transducer performance:

- Improved penetration and contrast resolution: Unlike conventional SonoSite transducers, a more efficient material has been embedded into the design that allows for the generation of more acoustic signal. In parallel, a reflective layer has been added to reduce the loss of this signal, as it is transmitted into the patient.
- Sharpened detail resolution: An additional layer has been added to provide a better acoustic match between the transducer and the patient, increasing the ability to resolve small structures and aid in your diagnostic confidence.
